1. Description

1.1 General Description

This production has a high reliability, good heat dissipation, are widely used in the disinfection, phototherapy, sensor light, Bio-Analysis/Detection, Counterfeit Detectors, etc.

1.2 Features

Size(mm):3.7*3.7*1.8.

Viewing angle:120° .

Suitable for all SMT assembly and solder process.

Available on tape and reel.

Moisture sensitivity level: Level 3.

RoHS compliant.

1.3 Application

Ultraviolet disinfection.

Phototherapy.

Bio-Analysis/Detection.

General use.

1.4 Package Dimension

1.5 Product Parameters

Table 1-1 Electrical / Optical Characteristics at Ts=25°C

Item	Symbol	Test Condition	Code	Value			Unit
				Min.	Typ	Max.	
Forward Voltage	V_F	$I_F=100\text{mA}$	B16	4.0	---	4.2	V
			B17	4.2	---	4.4	
			B18	4.4	---	4.6	
			B19	4.6	---	4.8	
			B20	4.8	---	5.0	
			B21	5.0	---	5.2	
			B22	5.2	---	5.4	
			B23	5.4	---	5.6	
			B24	5.6	---	5.8	
			B25	5.8	---	6.0	
			B26	6.0	---	6.2	
			B27	6.2	---	6.4	
Reverse Current	I_R	$V_R=10\text{V}$	---	---	---	5	μA
Total radiant flux	e	$I_F=100\text{mA}$	1J03	6	---	10	mW
			1J04	10	11	15	
Peak wavelength		$I_F=100\text{mA}$	UA42	305	308	310	nm
			UA43	310	---	315	
Spectrum Half width		$I_F=100\text{mA}$	---	10	13	15	nm
Viewing Angle		$I_F=100\text{mA}$	---	---	120	---	deg
Thermal Resistance.	R_{THJ-S}	$I_F=100\text{mA}$	---	---	45	---	/W

Table 1-2 Absolute Maximum Ratings at Ts=25°C

Parameter	Symbol	Rating	Units
Maximum Power Dissipation	P_D	0.8	W
Peak Forward Current	I_{FP}	120	mA
Reverse Voltage	V_R	10	V
Electrostatic Discharge (HBM)	E_{SD}	1000	V
Operating Temperature	T_{OPR}	-30 ~ +85	
Storage Temperature	T_{OPR}	-40 ~ +100	
Junction Temperature	T_J	85	

Notes

- 1/10 Duty cycle, 0.1ms pulse width.
- The above forward voltage measurement allowance tolerance is $\pm 0.1V$.
- The above wavelength measurement allowance tolerance is $\pm 2nm$.
- The above radiation flux measurement allowance tolerance $\pm 10\%$.
- Care is to be taken that power dissipation does not exceed the absolute maximum rating of the product.
- All measurements were made under the standardized environment of Refond.
- When the LEDs are in operation the maximum current should be decided after measuring the package temperature, junction temperature should not exceed the maximum rate
- ESD yield is over 90% at 1000V ESD (HBM). ESD protection during products handing is needed.

3.1 SMT Reflow Soldering Instructions SMT

Fig.3-1 SMT Reflow Soldering Instructions

Table 3-1 SMT Reflow Soldering Instructions

Average temperature rise speed	T_{smax} T_P	Max 3 °C/ s	3 °C/
Preheating: minimum temperature	(T_{smin})	150 °C	
Preheating: Max temperature	(T_{smax})	200 °C	
Preheating: Time	T_{smin} T_{smax}	60s-120s	60 - 120
Time limited to maintain high temperature: the temperature (T_L)		217 °C	
Time limited to maintain high temperature: The Time (t_L)		Max 60s	60
Peak /Classification of temperature: / (T_P)		260 °C	
Time limit classification of peak temperature time t_p		Max 10s	10
Hold time within 5 °C with the actual peak temperature (T_P) 5 °C		Max 30s	30
Cooling speed		Max 6 °C/ s	6 °C/
Needed time from 25 °C to T_p 25 °C		Max 8 minutes	8

4. Handling Precautions

4.1 Handling Precautions

(1) LED operating environment and sulfur element composition cannot be over 100PPM in the LED mating usage material. This is provided for informational purposes only and is not a warranty or endorsement. LED

Fig 4-1 Operate Method

(5) In designing a circuit, the current through each LED can not exceed the absolute maximum rating specified for each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current change, burn out may happen. The driving circuit must be designed to allow forward voltage only when it is ON or OFF. If the reverse voltage is applied to LED, migration can be generated resulting in LED damage.

(6) Thermal Design is paramount importance because heat generation may result in the Characteristics decline, such as brightness decreased, lifetime, Color change and so on. Please consider the heat generation of the LEDs when making the system design. LED

(7) Compared to standard encapsulants, silicone is generally softer, and the surface is more likely to attract dust, requiring special care during processing. In cases where a minimal level of dirt and dust particles cannot be guaranteed, a suitable cleaning solution must be applied to the surface after the soldering of components. Refond suggests using isopropyl alcohol for cleaning. In case other solvents are used, it must be assured that these solvents do not dissolve the package or resin. Ultrasonic cleaning is not recommended. Ultrasonic cleaning may cause damage to the LED.

Table 4-1Storage

Conditions		Temperature	Humidity	Time
Storage	Before Opening Aluminum Bag	30	75%	Within 1 Year From Date
	After Opening Aluminum Bag	30	60%	24hours 24
Baking		60 5	-	24hours 24

(8) If the moisture absorbent material silica gel has faded away or the LEDs have exceeded the storage time, baking treatment should be performed after unpacking and based on the following condition 65 5 for above 24 hours.

If the package is flatulence or damaged, please notify the sales staff to assist.

(9) Similar to most Solid state devices; LEDs are sensitive to Electro-Static Discharge (ESD) and Electrical Over Stress (EOS).

(10) When using this product, you need to take good care to prevent it from causing harm to eyes and human body.

(11) Other points for attention, please refer to our relevant information.
